All Mobile Video Upgrades Flagship Celebrity Mobile Unit To High Definition in Record Time by using PatchAmp Patching & Distribution Systems

Hackensack, NJ February 14, 2005

All Mobile Video has upgraded their flagship mobile unit Celebrity to High Definition Serial Digital Video with minimal down time by employing two of the PatchAmp PA-10032 High Density Patching & Distribution Frame with its patent pending HD Mult connector. The new quick connect/disconnect Mult system reduced installation time and solved weight and cable reduction issues in Celebrity. The Mult system also reduced the margin of error during the installation. Each PA-10032 included sixty-four PA-6000-402 Multi-Rate Serial Digital High Definition 1x4 distribution amplifiers and ten 1-rack unit 32-position Mini WeCo video patchpanels. All Mobile Video also replaced sixteen 10-slot old style DA trays with three PatchAmp PA-3200HD High Density DA trays. Each 4-rack unit PatchAmp High Density Distribution Amplifier tray can house up to 64 1x4-distribution amplifiers.

In less than 30 days, the two PA-10032 frames along with the three PA-3200HD frames were integrated into Celebrity and were interconnected to a 128x128 HD Routing Switcher, 16 HD Cameras, 20 HD VTR's and the Monitor wall. This was all possible because the PatchAmp Patching & Distribution Systems eliminated the traditional patchpanel to distribution amplifier wiring.

PatchAmp, located in Hackensack, NJ just minutes outside of NYC has rapidly established a reputation as the leader in innovative, high quality, cost-effective patching and distribution solutions.
