## Application Note Combo Audio/Video DA Frame: All Mobile Video Purchases PatchAmp's 3200AVHD Frame

Hackensack, NJ July 19, 2005

All Mobile Video has purchased PatchAmp's 3200AVHD frame for use in their uplink truck. One of PatchAmp's high-density 4 RU frames may contain up to 64 audio DAs and 32 video DAs. The PA-3200AVHD frame has the capacity to store more than four times as many DAs as found in an old-style frame. The same frame accepts analog video, SD, HD, DVB-ASI, AES, and analog audio.

The frames are 1/4 the rack space and 1/4 the weight of old-style frames. Convenience is high, because the frames require less space and will not crowd up your racks as old-style frames might do. The PatchAmp PA-3200AVHD is an especially good choice for applications like the AMV Uplink Truck where space is limited.

These frames are customizable to meet your needs and may include any mix or quantity of DAs according to what is desired. Rear panels may be configured with the connectors of your choice.
